

Where the certified data is -- lumisections per run

CMS Preliminary

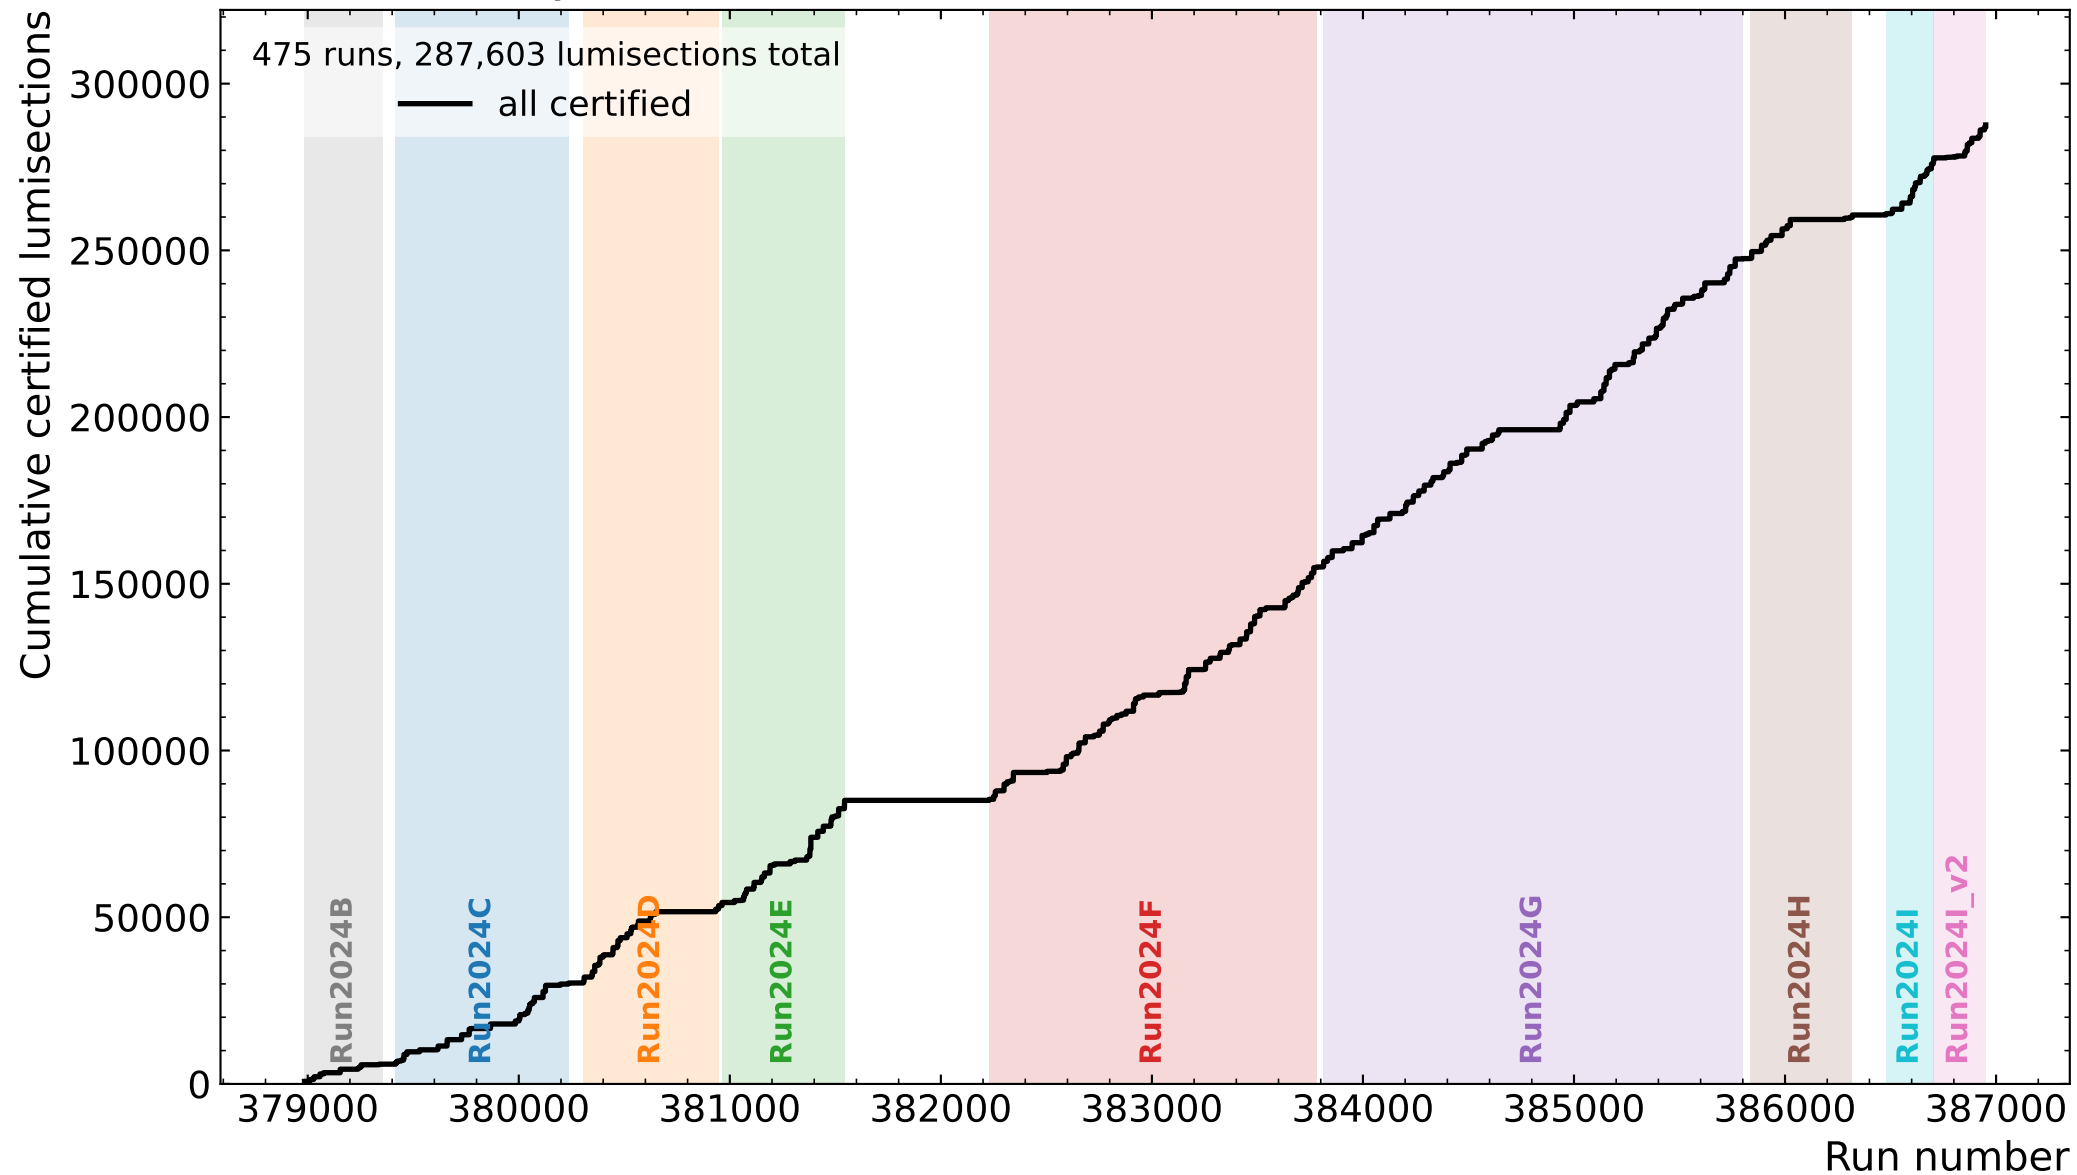

(13.6 TeV, 2024)

How the certified total accumulates through the year

CMS Preliminary

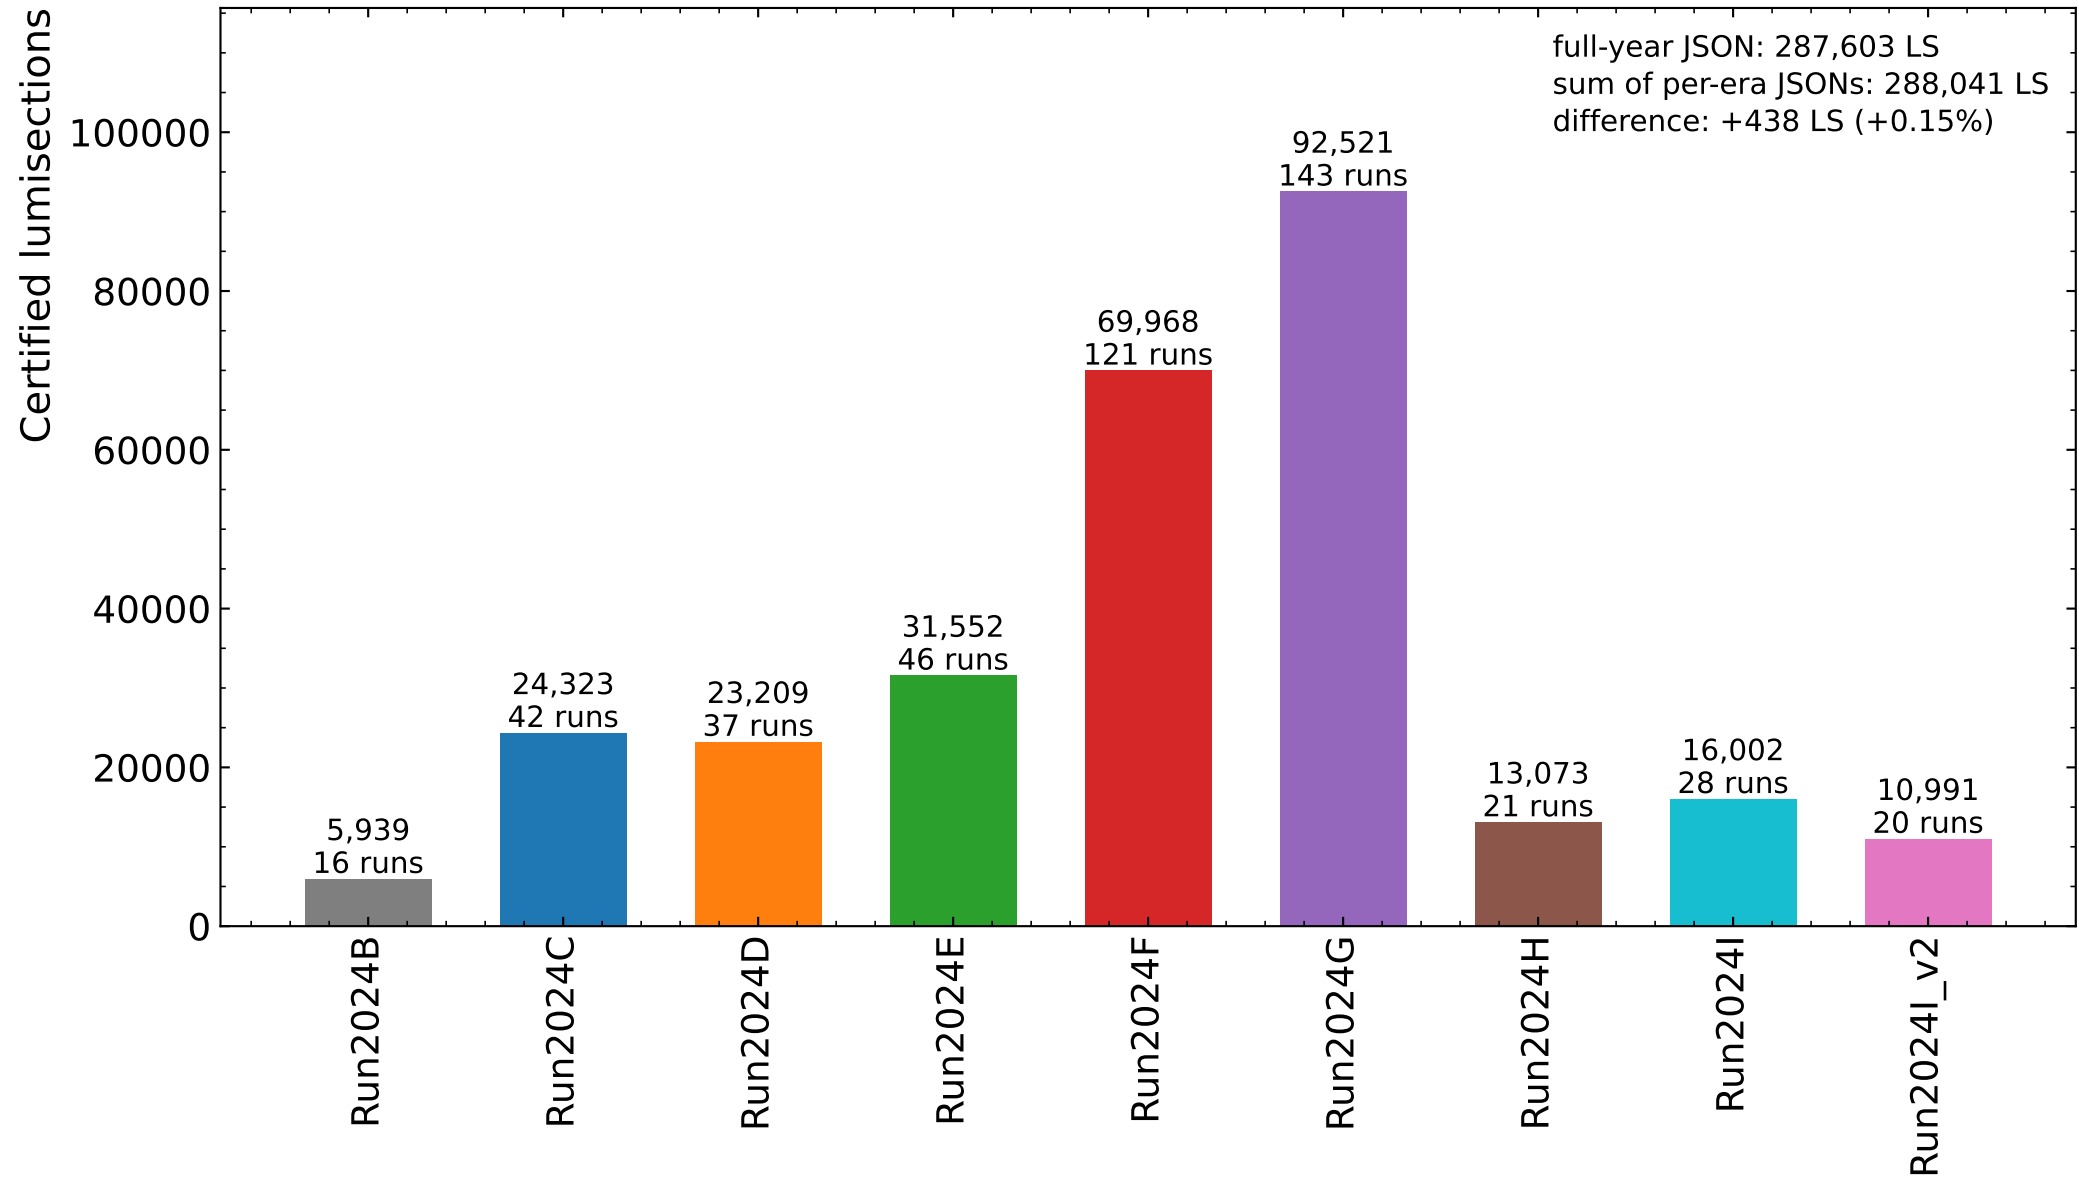

(13.6 TeV, 2024)

Certified lumisections per era

CMS Preliminary

(13.6 TeV, 2024)

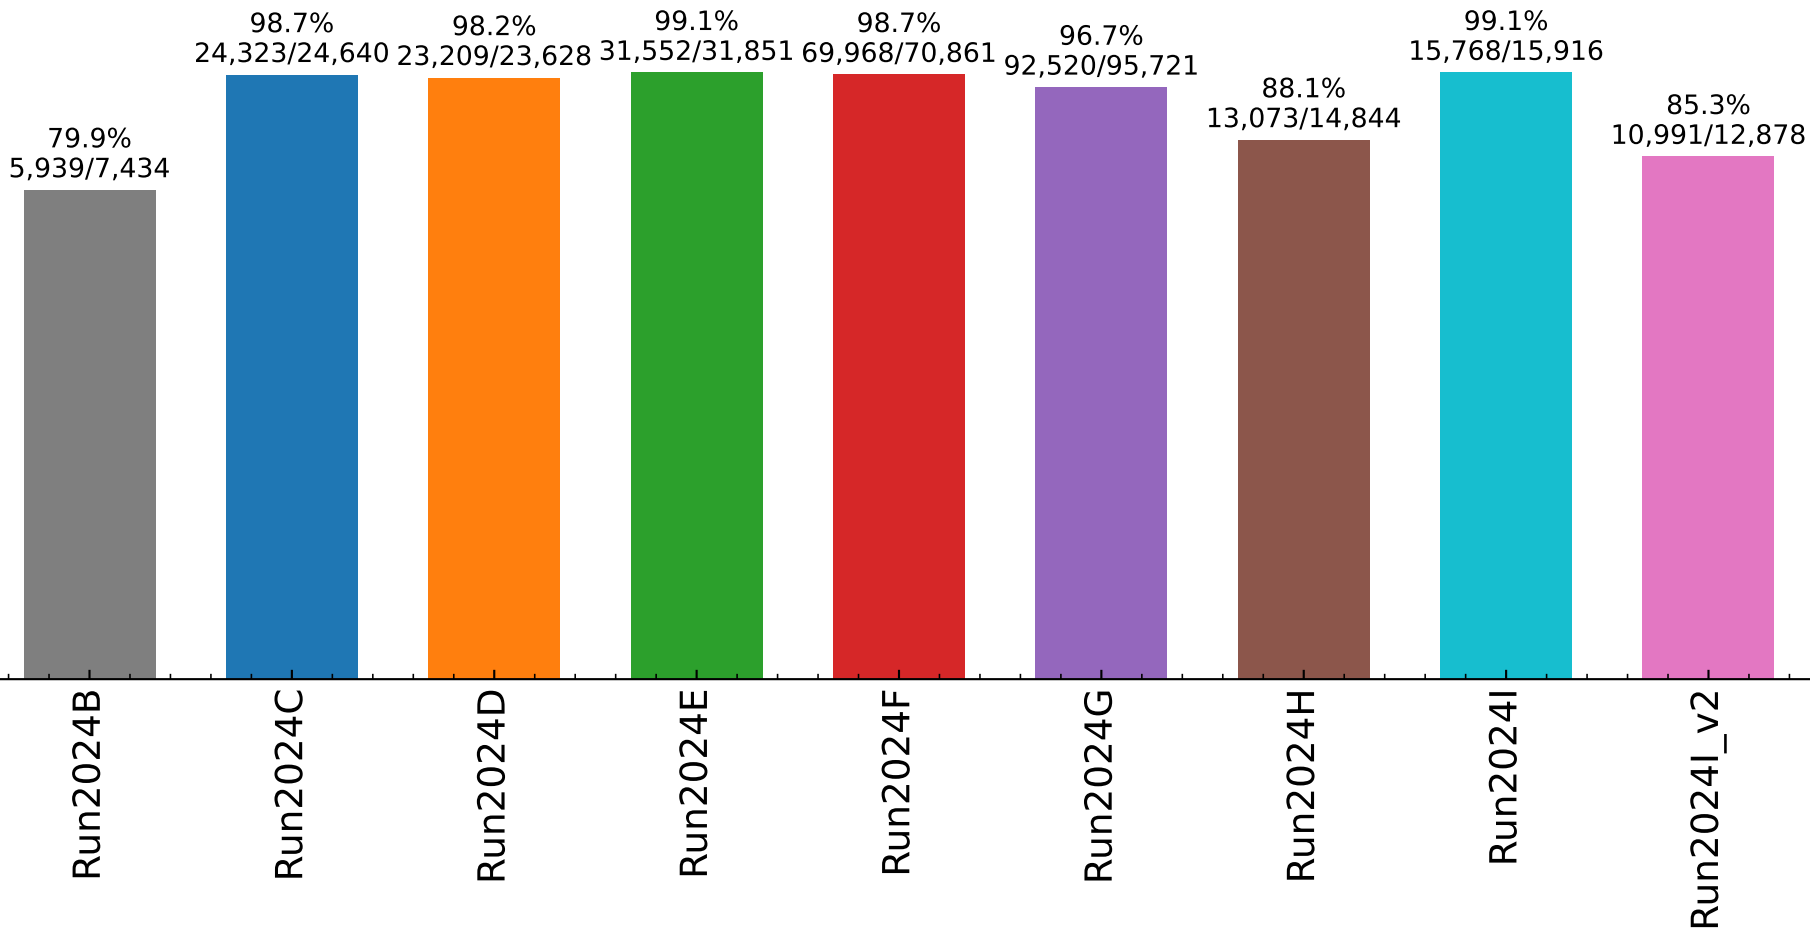

What fraction of each era survives the golden JSON?

CMS Preliminary

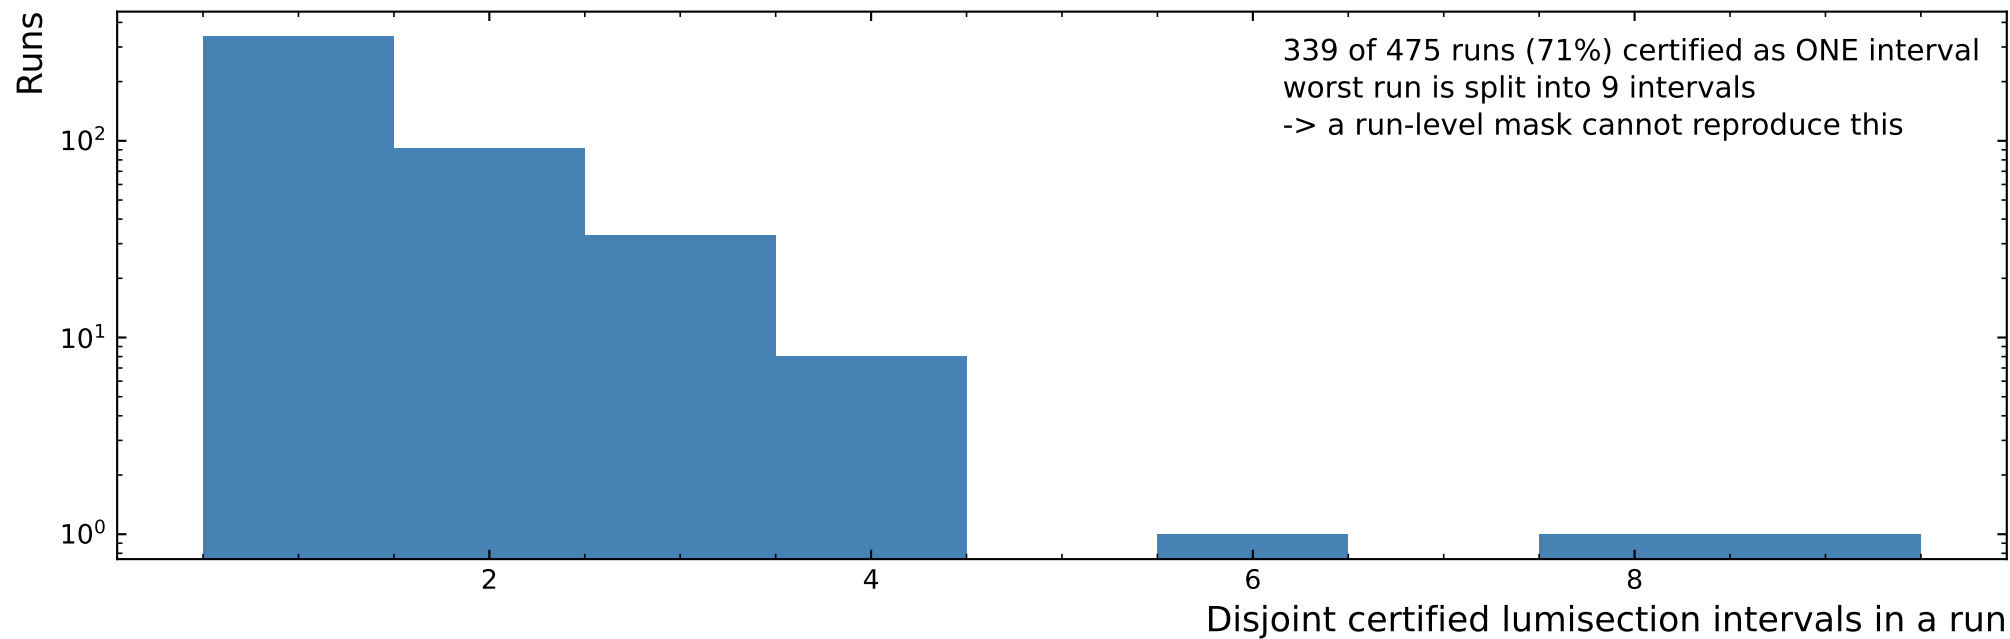

(13.6 TeV, 2024)

Certified fraction of recorded lumisections [%]

all eras: 96.5% (287,343 / 297,773)
numerator: golden AND DCS denominator: DCS-only
lumisections, NOT integrated luminosity
234 golden LS lie OUTSIDE DCS (excluded)

How fragmented is the certification?

Most fragmented runs: green = certified, grey = not
